

DATASHEET

Montana

SRF2I019 • flexiiANT®

Features

- Antenna for ISM and LoRa® bands (863 – 870MHz and 902 – 928MHz)
- Maintains high performance within device: DFI (Designed For Integration)
- 1.13mm diameter RF cable with I-PEX MHF connector
- Self-adhesive mounted
- Quick integration minimizes design cycle
- High performance
- 100mm cable – (other lengths available, MOQs apply)

1. Description

Montana is intended for use with ISM and LoRa® applications. It is a flexible antenna with a cable that enables direct connection to the host PCB giving easy integration with plug and play simplicity. This product specification shows the performance of the antenna to cover a typical dual band ISM from 863 – 928MHz.

2. Applications

- Remote sensors
- Smart meters
- Medical devices
- Monitoring equipment
- Automotive devices
- LoRa® Gateway/Routers
- LoRa® wireless nodes

3. Part number

SRF2I019

4. General data

Frequency	863-928MHz
Polarization	Linear
Operating temperature	-40°C to +85°C
Environmental condition test	ISO16750-4 5.1.1./5.1.2
Impedance with matching	50 Ω
Weight	<0.5g
Antenna type	FPC Self-adhesive 3M 468MP
Dimensions antenna	Diameter 45 x 0.15 (mm)
Connection	I-PEX MHF1 (20278-112R-13)
Cable length (mm)	100 (other lengths available)

5. RF characteristics

Typical performance	
Peak gain	1.9dBi
Average gain (Linear)	-2.4dBi
Average efficiency	>50%
Maximum return loss	<-11dB
Maximum VSWR	1.70:1

6. RF performance

6.1. Return loss

6.2. VSWR

6.3. Efficiency

6.4. Antenna pattern

6.4.1. 863 MHz – 870 MHz

3D pattern at 865 MHz

6.4.2. 902 MHz – 928 MHz

3D pattern at 915 MHz

7. Antenna dimensions

7.1. Dimensions FPC section

2 Holes = 1.5mm Ø (diameter)

Ø	T
Diameter	Thickness
45.0 ±0.2	0.15 (mm) nominal

All dimensions in (mm)

7.2. Dimensions assembled

SRF2I19-100
Length
101 ±2.0

All dimensions in (mm)
Standard cable length for this antenna is 100mm.

7.3. I-PEX connector MHF1 (20278-112R-13)

I-PEX	
Material	Copper alloy
Plating	Ag

All dimensions in (mm)

7.4. Assembly

8. Electrical interface

8.1. Host interface

The host PCB requires the mating connector which is the I-PEX MHF (UFL) receptacle. The location should be close to the chip/modules pin for the RF. Any feed from this receptacle should be maintained at 50Ω impedance

8.2. Transmission line

- Must have a characteristic impedance of 50Ω.
- Length should be kept to a minimum.
- Is recommended to be a co-planar waveguide: log on to [Antenna.com](https://www.antenna.com) and try our [Transmission line calculator](#) to easily calculate the dimensions most suited to your requirements.
- Should have DC blocking capacitor (e.g. 220pF) placed in line to protect the RF front end.

9. Mechanical fixing

The antenna uses 3M 468MP adhesive on the reverse side of the FPC. The antenna has an easy access split line to peel off to reveal the adhesive side. It is designed for a one time fix to a clean smooth surface. The antenna is keyed with two 1mm locating holes for easy positioning.

FPC back side

10. Antenna integration guide

We recommend the following during the design phase to maximise antenna performance and minimize noise:

- Minimum 4 layer PCB
- Route signals and power internally where possible
- Flood all layers with ground
- Knit ground on all layers together with plenty of vias

Follow placement guidance carefully, in addition Antenova provide technical support to help you through all stages of your design. Register for an account on <https://ask.antenova.com/> to access technical support.

10.1. Antenna placement

For FPC antennas the host PCB size is not critical to performance, however consideration must be given to placement. Using six spatial directions, as shown below, the antenna should ideally maintain a minimum of three directions free from obstruction in order to radiate effectively. Where there are obstructions (e.g. PCB, metal parts, battery etc.) a minimum clearance should still be maintained. These minimum clearances are described later in this section.

Six spatial directions relative to FPC

Example with 5 spatial directions clear

10.2. Orientation of FPC

The orientation of the FPC with respect to the host PCB should be defined depending on the unit. The proximity of the GND will have an influence on the antenna so the PCB location relative to the antenna should be considered.

The FPC will normally be placed in one of the three following options for orientation. In each option a distance (d) is the critical dimension to consider. The diagram below shows the minimum value of (d) for each. Other obstructions may increase this dimension.

Vertical mounted

Co-planar to PCB

Planar to PCB (Same plane)

10.3. Device Integration Example

An example of integration within a device is shown below. The device contains the major components along with the device outer case. The FPC is shown adhered to the inside of the plastic housing of the device. The length of the cable is sufficient to allow ease of assembly when produced (SRF21019-100).

The FPC was placed parallel relative to the PCB. The FPC is kept at a maximised height above the PCB to ensure it is above the minimum clearance of $\geq 15\text{mm}$. This example shows the FPC 20mm above the PCB.

11. Hazardous material regulation conformance

The antenna has been tested to conform to RoHS and REACH requirements. A certificate of conformance is available from Antenova’s website.

12. Packaging

The antennas are stored within a plastic bag of 100 pcs.

Single antenna per bag

100 units per bag (Labelled)

12.1. Optimal storage conditions

Temperature	-10°C to 40°C
Humidity	Less than 75% RH
Shelf life	18 Months
Storage place	Away from corrosive gas and direct sunlight
Packaging	Antennas should be stored in unopened sealed manufacturer’s plastic packaging.

Note: The shelf life of the antenna is 18 months, provided the bag of 100 pieces remains factory- sealed.

12.2. Label information

Data sheet

2.02 release 12th June 2026

Antenna design, integration and test resources

Product designers – the details contained in this datasheet will help you to complete your embedded antenna design. Please follow our technical advice carefully to obtain optimum antenna performance.

We aim to support our customers to create high performance wireless products. You will find a wealth of design resources, calculators and case studies to aid your design on our website.

Antenova's design laboratories are equipped with the latest antenna design tools and test chambers. We provide antenna design, test and technical integration services to help you complete your design and obtain the required certifications.

If you cannot find the antenna you require in our product range, please contact us to discuss creating a custom antenna to meet your exact requirements.
